

# Exeon.Visibility

## The fastest path to complete network visibility

Unleash the power of your network data

Exeon.Visibility allows for fast and agentless network intelligence. By leveraging network logs, Exeon.Visibility provides an aggregated view of all the network traffic, monitors network policies and provides alerts in the case of violations.

**Traffic visualization**

Unified visibility into hybrid and decentralized infrastructures, unaffected by encrypted traffic.

**Policy enforcement monitoring**

Flags violations in real time to help maintain compliance and enforce network rules.

**Shadow IT recognition**

Automatically uncovers unauthorized apps, cloud services, or devices to reduce risk.

**Based on network logs**

Leverage your existing network logs for instant visibility – no agents, no sensors, no infrastructure changes.

**Data sovereignty**

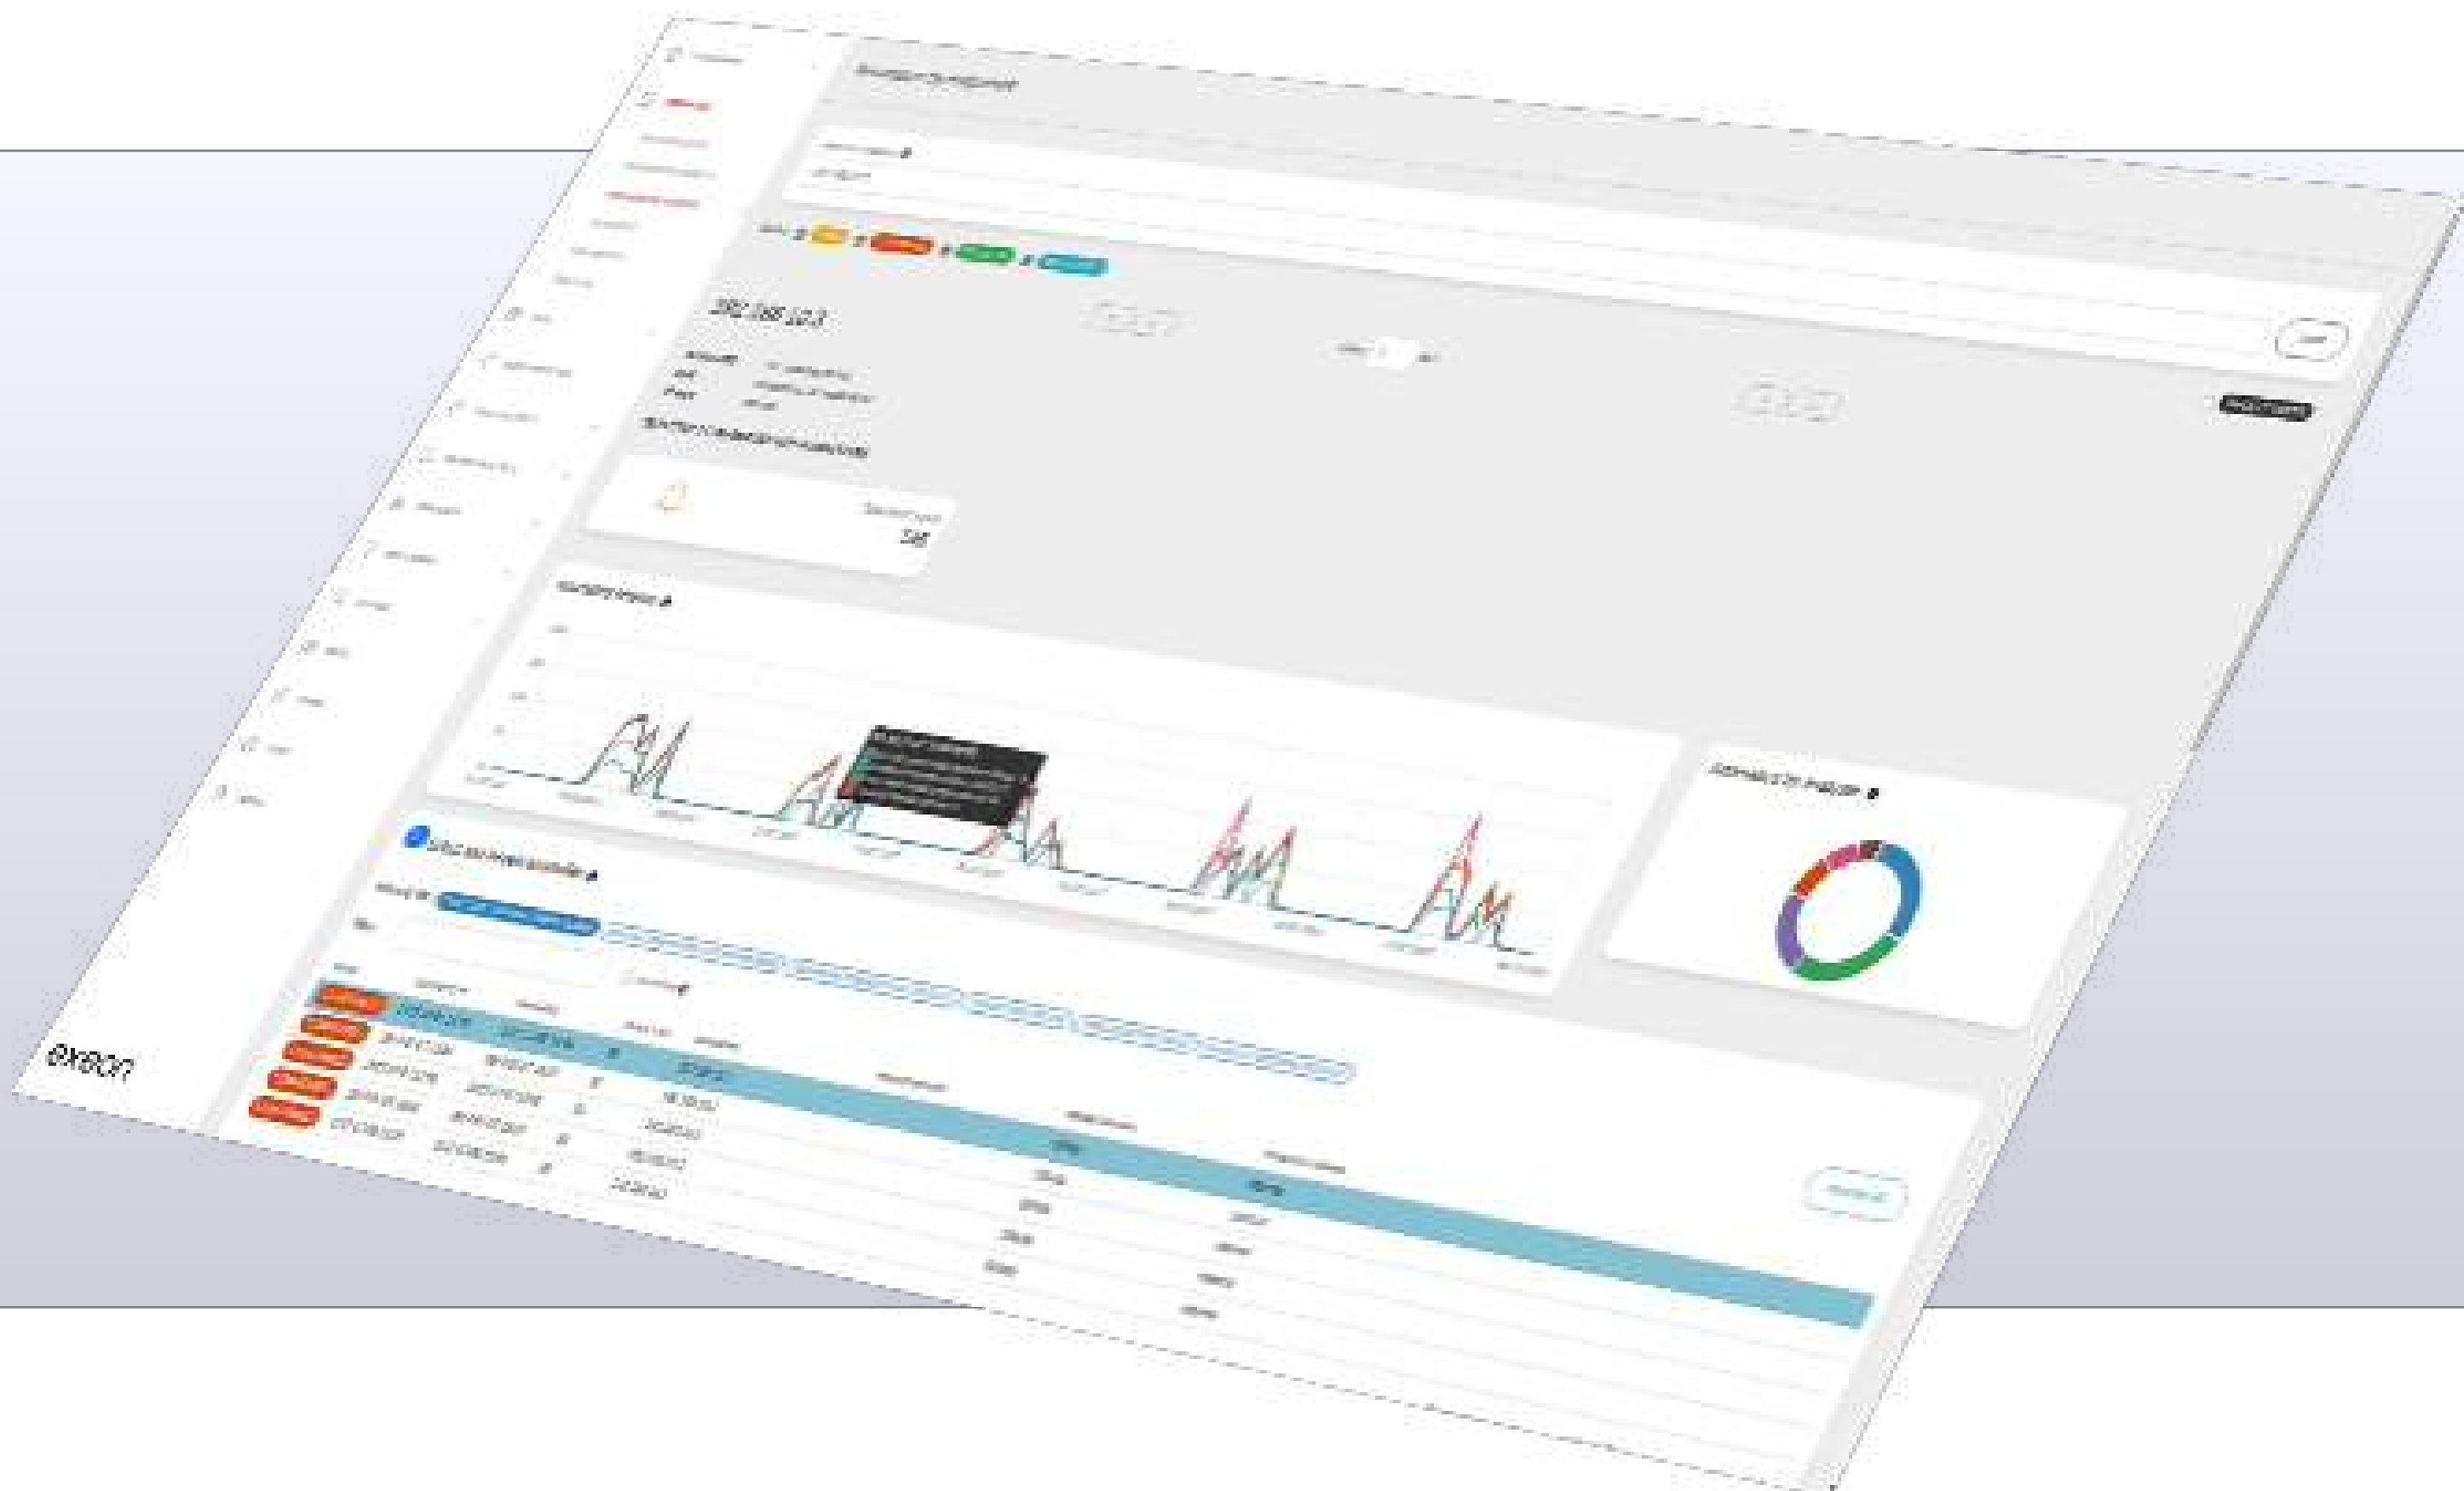

Self-hosted by default - all data stays within customers secure, controlled environments (private cloud or on-premises).

**Scalable detection**

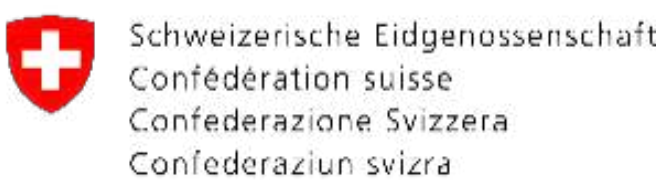

Easily upgradable to AI-powered anomaly detection for advanced threat detection (zero-day attacks, lateral movement, beaconing, command & control etc).

### Fast. Scalable. Secure.

Fast deployment, built for hybrid networks, full data sovereignty.

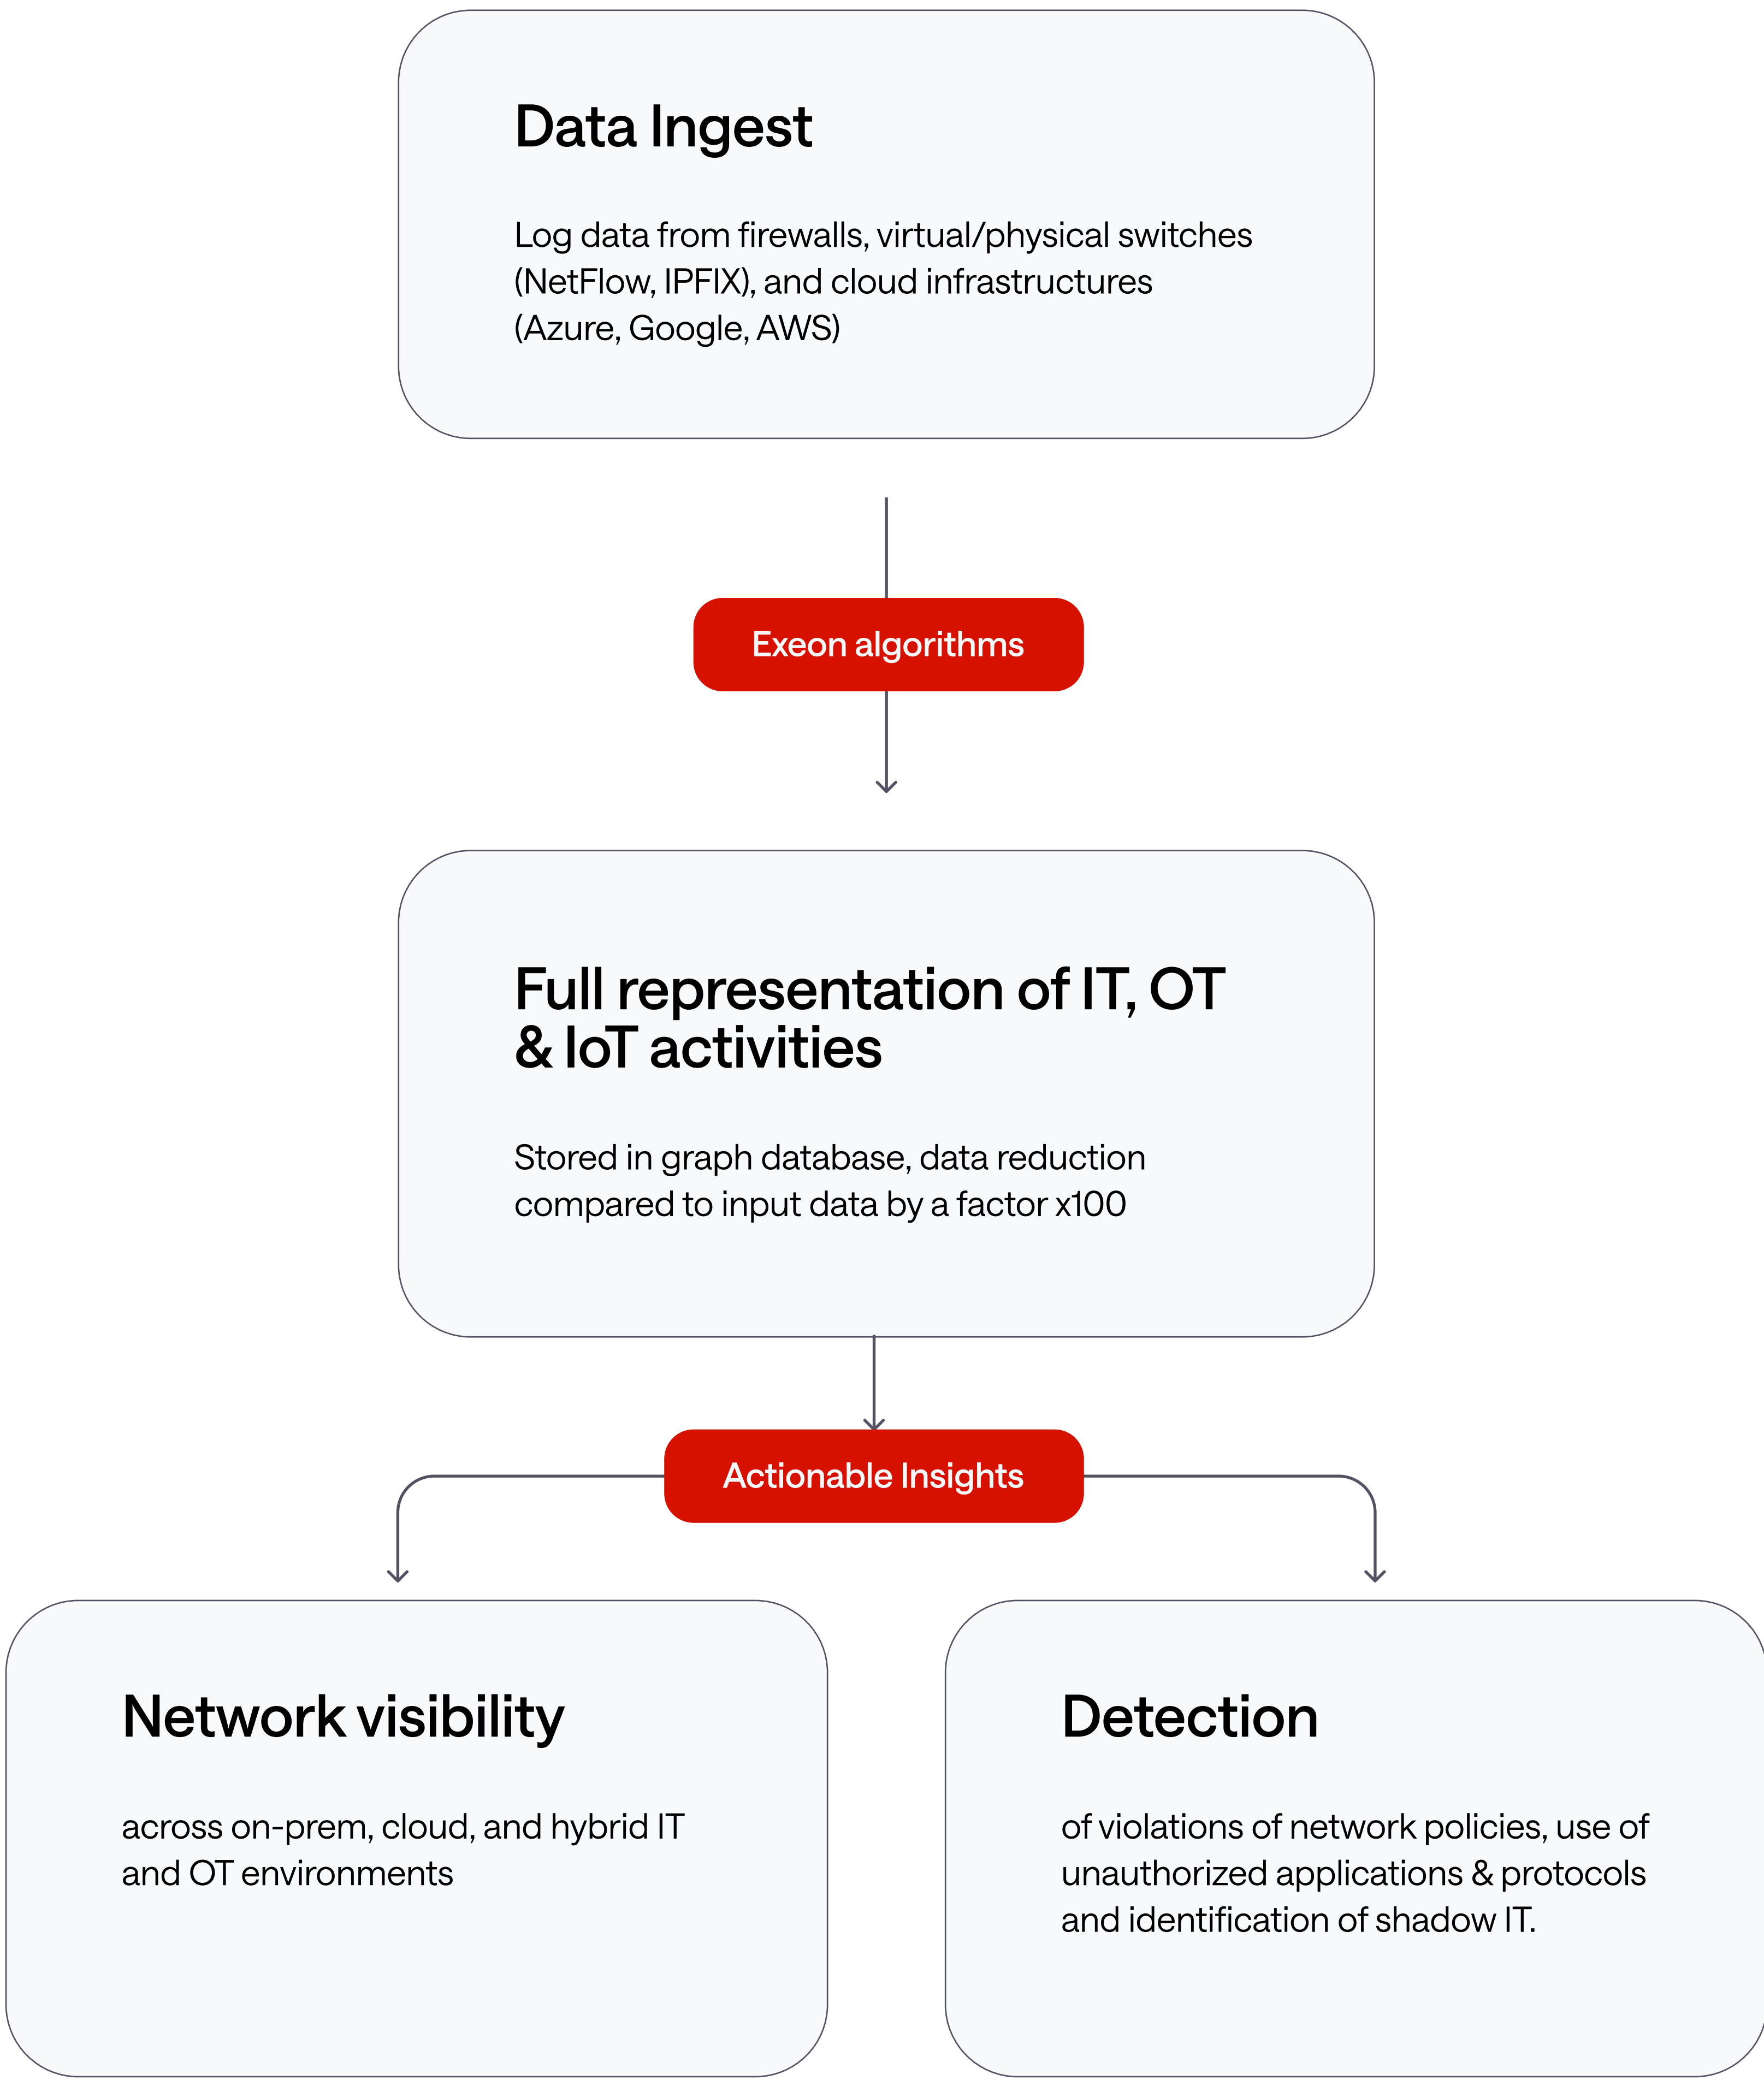

Trusted by

# How Exeon.Visibility Delivers Network Intelligence

### How leading companies use Exeon.Visibility capabilities

**Swiss Bank**

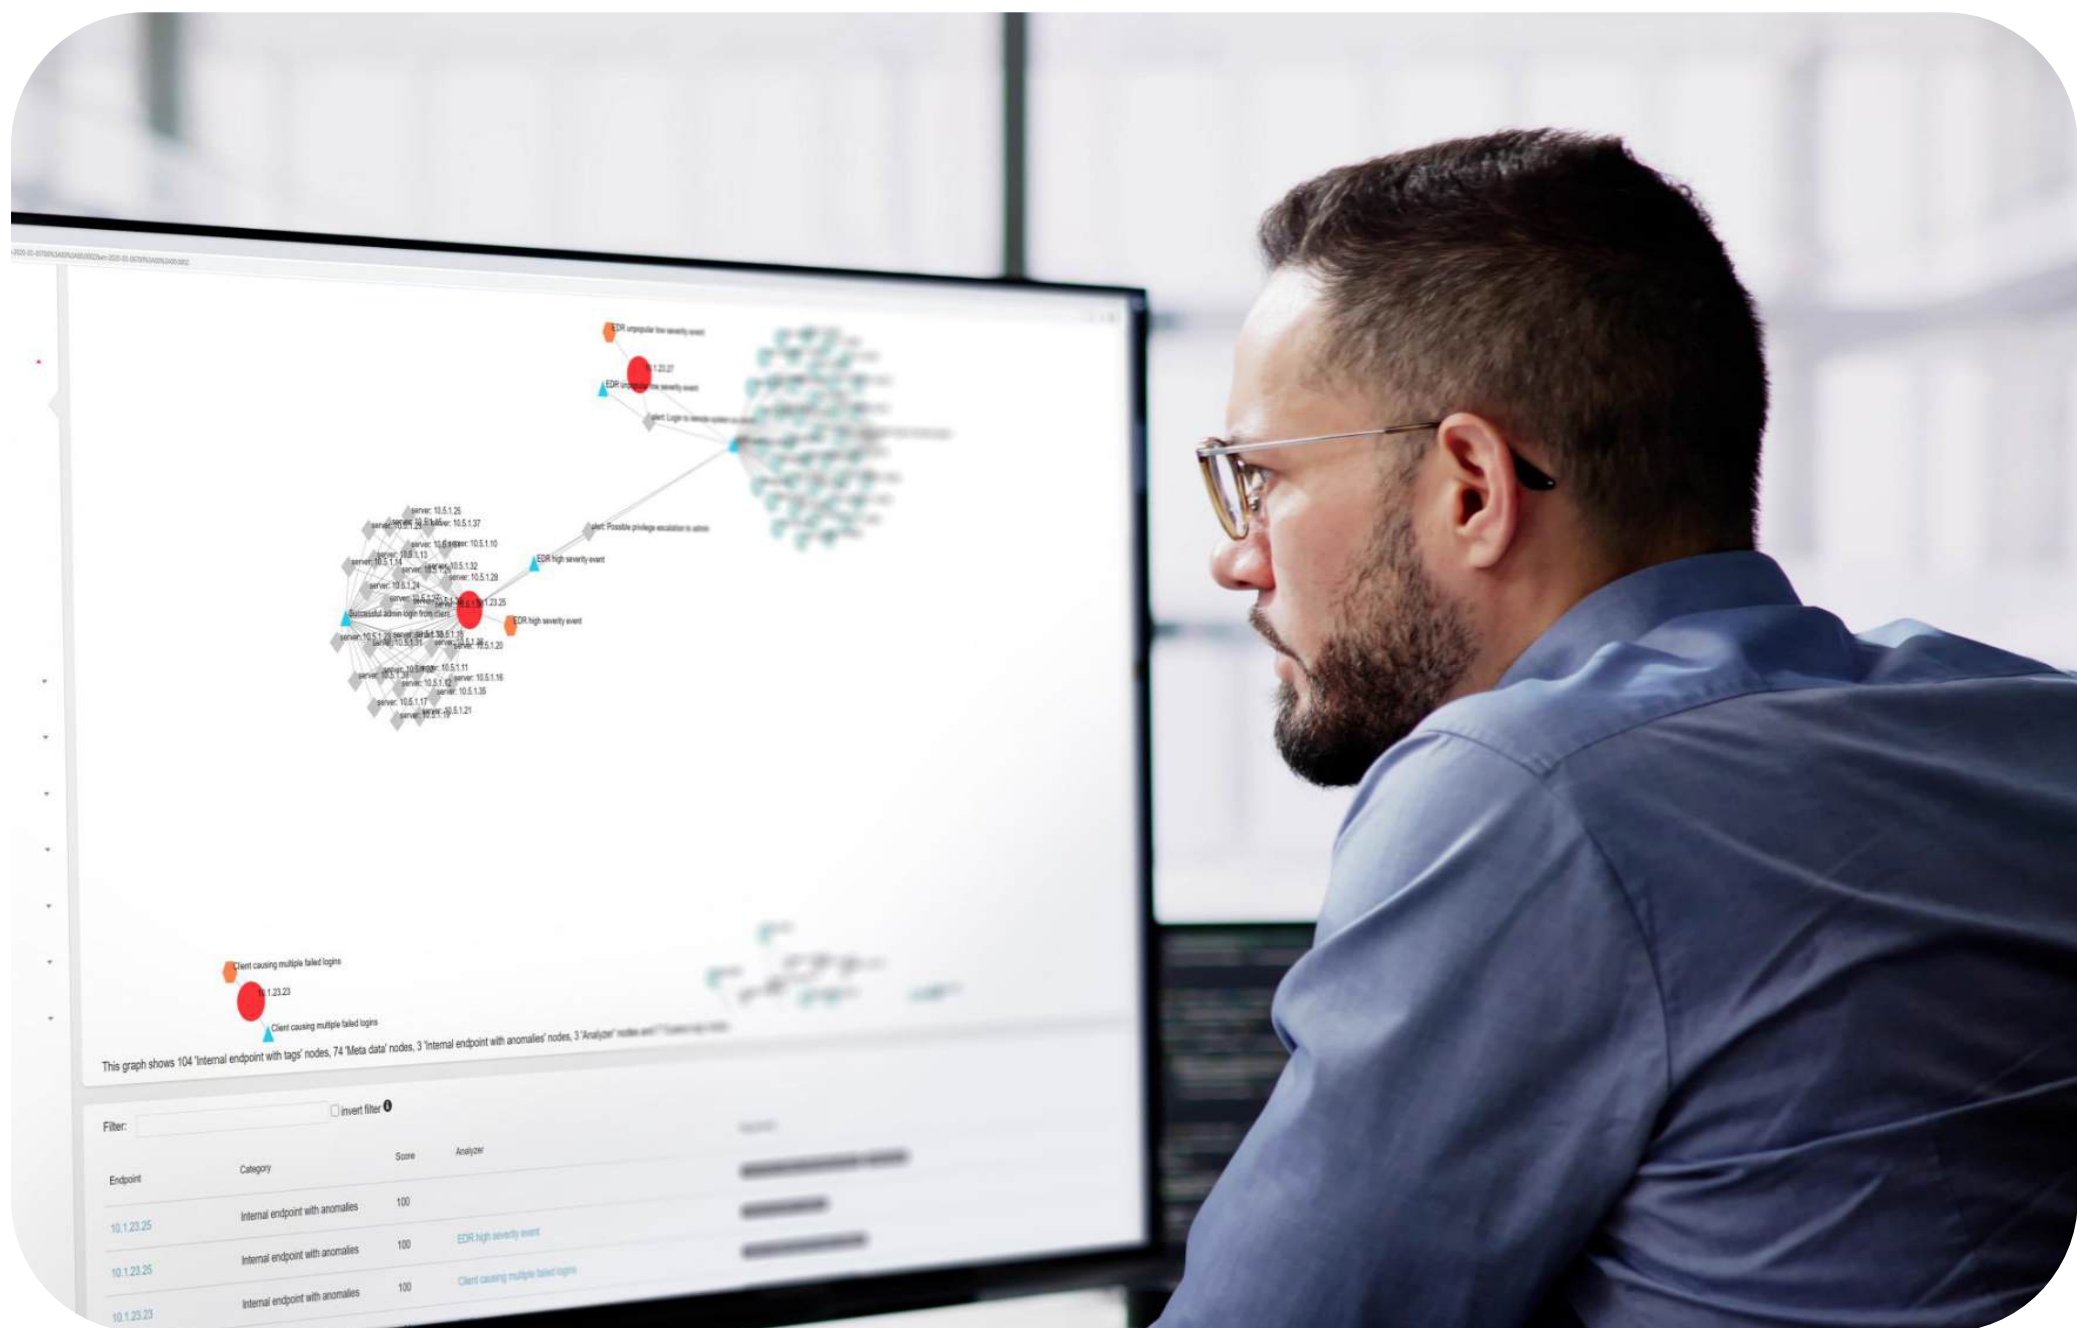

Reduced policy violations by 85% in 3 months by using log-based insights.

**Global Manufacturer**

Uncovered 40+ unauthorized SaaS apps in their hybrid network within days.

**Government Agency**

Deployed Exeon.Visibility in 48 hours with no impact on network performance.
